The Premium Cartridge Company

Corporate Background Information

Jolek is a Canadian corporation that manufactures and distributes the latest imaging products through the distributor and reseller channel. Incorporated in the early part of 2002, Jolek's primary focus was to be able obtain all its Jolek branded products through contract manufacturing.

With a growing demand for the latest products and a strong need for a guaranteed continuous supply of core products, outsourcing showed to become unreliable and inflexible to come to market with the latest releases of new products. Jolek management then decided to invest in a more effective business model. In early 2003 Jolek manufactured its first laser cartridge, and we have not stopped coming out with new products.

Today, Jolek has an extensive ever growing portfolio of the latest products and imaging solutions used within the rapidly evolving imaging environment. These products include over 300 different types of color and monochrome laser cartridges compatible with the majority of the OEM printer, fax and copier manufacturers. Jolek has developed a strong customer base in Canada, the United States and in the general industry during more than 4 years in business.

With its team located in Montreal-Quebec, Jolek's commercial strengths are defined by its drive to market the latest products, its expanding diverse product portfolio and its willingness to remain flexible and at the leading edge of the imaging industry.
